Brad: Please respond to the writer and copy me the response so I can include it with the item when it goes on Schedule B.

Thanks
Rhonda

Subject: Clean water for Sauble

It is my understanding that you are replacing the water mains in areas of Sauble Beach. I am expecting that I will now be able to hook up to the main water. There are rumours that this may not be possible and that you are replacing pipes but not allowing water hook up. Is this true? Where can I find out more information? I have serious concerns about the cleanliness of water from wells in the Sauble area. We are all aware that the entire area is riddled with septic systems that are virtually non-existent and wells that are polluted from the lack of control over this issue. Please reassure me that we will be able to finally rely on clean water for our cottages in this main tourist area.

I fear a "Walkerton Disaster" in the near future...

Sincerely,

Kelly Ryan
